This software is a Java library for generating PDF. It is intended to generate web sites, print documents and other PDF content. The library is easy to use and is designed with great attention to detail. How does PDFjs generate HTML, CSS, Javascript and other components? In PDFjs this functionality is generated using a library named pdf.js. You can use the JS API of pdf.js to access this functionality. The output of this API is then passed through the PDF parser and as a result a PDF-like document is generated. Why do I get the message that my Java virtual machine is outdated? (pdf.js release 0.4.1) Due to changes in the PDF specification, the Java Virtual Machine requires to be at least version 1.5 to generate valid PDF. The pdf.js library can work with PDFs created by other programs (acrobat, word, any other program generating PDF) but it is recommended to use the program to create PDF files (or use a non-Java program) since the PDF is then valid and usable. The Java Virtual Machine on your computer (version 1.5 and later) can be used to create a valid PDF by executing the java command with the -Xms128m -Xmx1024m
